Description of product

Ref. No. 91900

High visibility waistcoat – DIN EN 471-compliant

The wearing of high visibility waistcoats at traffic accidents, breakdowns or on construction sites increases the general level of safety and protects the wearer in danger zones. A third advantage is that the reflective bands make the wearer more easily recognisable, earlier, at great distances or in the dark.

The German occupational health insurance institutions stipulate that high visibility waistcoats are to be carried in vehicles used in the course of employment and the motoring associations recommend them to be carried in vehicles used for private journeys (in some European countries there is already a general obligation to carry them in vehicles).

Our orange-red or fluorescent yellow high visibility waistcoats comply with the general requirements of DIN EN 471 and are made from PVC-coated, water-resistant fabric or from polyester fabric. The waistcoats are available in a washable orange solid PVC protective bag (recommended for frequent use) or in a transparent pouch.

GERMAN
Ref. No. 91700

ECE (EURO)
Ref. No. 91775

Warning triangle ECE/EURO

In Europe it is mandatory by law to carry at least one (in some cases two) warning triangles in motor vehicles. Making the site of an accident or breakdown safe by means of a warning triangle ensures that the situation will be recognised earlier by others, especially in the dark.

The warning triangles supplied by us comply with the general requirements of an accredited European testing establishment and are available in various designs and sizes (German and European versions).

Ref. No. 91995

Warning lamp

In contrast to passive warning triangles (they reflect the light striking them), a warning lamp flashes to provide active protection.

You can place the warning lamp to act as a signal on the road surface or on top of your vehicle. Carried in the hand it will increase the safety of the user and can also serve as a torch. The lamp is battery operated and is well protected in a robust plastic box.

Ref. No. 91990

Tow rope

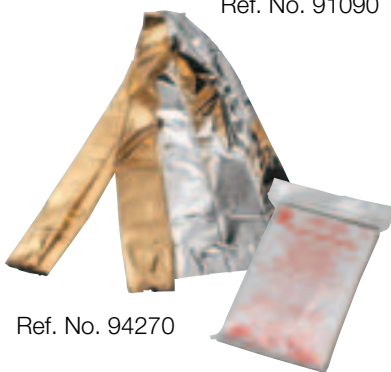

Unforeseen breakdowns such as a flat battery, a broken fan belt or a defective generator could mean that your vehicle is temporarily abandoned. Using a tow rope, your broken-down vehicle can be towed to a garage for repair. In order to ensure that towing can be carried out safely with a high towing force, the rope must be designed to carry at least 4 tonnes and be of good quality.

Ref. No. 91090

Safety during transport of dangerous goods (GGVS)

In the field of safety during the transport of dangerous goods, it is stipulated beyond DIN 13 164 B the carrying of protective glasses, acid-resistant gloves, eyewash bottles, disposable aprons and a rescue blanket.

Ref. No. 94270

Rescue blanket

An indispensable and versatile aid and life saver. In an emergency you can use a rescue blanket as something to lie on, as protection against heat or cold, against rain, to wrap or carry objects or, cut into pieces, to block up a window etc.
